Computer Science Engineer · Chennai, India

Hemadharshini

R.

Building intelligent systems at the intersection of web development and machine learning. I turn data into decisions and interfaces into experiences.

Python JavaScript Machine Learning Web Dev Data Science Flutter

Who I am

Passionate about solving complex problems with code

I'm a Computer Science and Engineering student at SNS College of Technology (2023–2027) with a strong foundation in software development, algorithms, and machine learning.

From building secure login systems with vanilla JavaScript to training regression models that predict car prices, I enjoy working across the full spectrum — from raw data to polished UI. I adapt quickly to new technologies and thrive in team environments where innovation matters.

Currently seeking opportunities to contribute meaningful solutions and grow alongside cutting-edge teams.

- **Phone**9043313321
- **Email**hemadharshini233@gmail.com
- **Location**Dharmapuri – 636805, Tamil Nadu
- **Languages**English, Tamil
- **Degree**BE Computer Science & Engineering
- **Batch**2023 – 2027

What I bring

Technical & Soft Skills

Python

Data pipelines, ML models, Pandas, Scikit-learn

JavaScript

DOM manipulation, form validation, async logic

Web Development

HTML, CSS, Node.js, PHP, responsive layouts

Machine Learning

Regression, feature engineering, model evaluation

Flutter / React Native

Cross-platform mobile app development

Problem Solving

Algorithmic thinking, debugging, system design

Presentation

Technical communication, stakeholder demos

Cloud Basics

Firebase, AWS backend, Azure AI Fundamentals

Where I've worked

Internship Experience

Web Development Intern

Genuine ITsolution

2023 – 2024

Built a secure login page using HTML and CSS for structure and styling, with JavaScript handling form validation and authentication. Integrated with a Node.js / PHP backend for user verification — delivering a seamless and secure user onboarding flow.

Data Science Intern

Nxtlogic

2024 – 2025

Developed a car price prediction system using regression models trained on features such as mileage, brand, and year. Preprocessed data with Pandas and Scikit-learn, focusing on robust feature engineering and rigorous model evaluation to maximise prediction accuracy.

What I've built

Live Projects

2023 – 2024

Women Safety App

A mobile safety platform featuring emergency SOS alerts, real-time GPS location sharing, and quick-dial contacts. Built for cross-platform compatibility using Flutter / React Native, with Firebase or AWS handling secure data storage and push notifications.

Flutter React Native Firebase GPS API AWS

2024 – 2025

Car Price Prediction

A machine learning model that estimates a vehicle's market value based on brand, model, age, mileage, fuel type, and condition. Helps buyers and sellers determine fair pricing by analysing historical data and market trends — useful across automotive sales, insurance, and resale sectors.

Python Scikit-learn Pandas Regression

Let's connect

Open to opportunities

Whether it's an internship, project collaboration, or a full-time role — I'd love to hear from you. Let's build something impactful together.
